COVID-19 AND FARM STANDS
STEPS FOR FARM STAND OPERATORS

BEST PRACTICES

• Farmers and customers should not come to a farm stand if they are displaying symptoms of COVID-19, or have come in contact with someone who is sick. Anyone displaying symptoms should be asked to leave.

• Farmers displaying symptoms, or living with someone displaying symptoms, should not harvest or sell food.

• Farm stands should provide handwashing and/or hand sanitizer at entrances and register/cash box. If someone is staffing the farm stand they should use hand sanitizer after every transaction.

• Avoid taking in cartons or containers that can't be cleaned and disinfected.

• If possible, pre-portion or pre-package items in bags or cartons before they are sold.

• Eggs should be sold in single-use containers.

COMMUNICATION

• Communicate with customers through signs or social media asking them to stay home if displaying symptoms.

• Provide hand sanitizer at the front of the stand and near the cash box. Use signs to remind people to use sanitizer before shopping, before paying and after leaving.

• Ask customers to only touch items that they intend to purchase.

CLEANING AND DISINFECTION

• Use non-porous plastic tables that can be easily disinfected if possible.

• Think about touch points throughout the stand like baskets, tables, cash boxes, etc. Eliminate or disinfect as frequently as possible, at least at the end of the day.

• CDC is recommending use of disinfectants on the EPA list found at: go.ncsu.edu/epacovid-19
  ▪ Note: this list is based on current data, but compounds have not been validated for inactivation of the virus causing COVID-19
  ▪ Bleach may be used to disinfect surfaces, but the concentration is higher for COVID-19 than for everyday sanitation: 5 tablespoons bleach per gallon of water

The University of Nebraska does not discriminate based upon any protected status.
